### **DETAILED ACTION**

# Claim Rejections - 35 USC § 112

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicant recites the limitation, "nickel catalyst doped with iron and/<u>or</u> chromium", but later requires the catalyst to comprise both iron and chromium. Proper correction is required.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1,503,723.

Applicant claims a method for manufacturing menthol by catalytic hydration of starting materials having the carbon network of methane with at least one double bond

Application/Control Number: 10/525,050

Art Unit: 1621

and which are substituted in 3-position by oxygen and/or catalytic rearrangement of stereoisomers of the menthol in the presence of hydrogen, characterized in that the reaction is performed in the presence of a nickel catalyst doped with iron and/or chromium at a temperature in the range 80-230°C and hydrogen pressures in the range 1-200 bar abs.

# Determination of the scope and content of the prior art (MPEP §2141.01)

EP 1,503,723 teaches the following reaction scheme wherein the Nickel catalyst may comprise metal modifiers selected from AlCl(I-ProO)<sub>2</sub>, CrCl<sub>3</sub>6H<sub>2</sub>O or FeBr<sub>3</sub>:

$$H_2/Ni$$
 $H_2/Ni$ 
 $H_2/Ni$ 
 $H_3/Ni$ 
 $H_4/Ni$ 
 $H_5/Ni$ 
 $H_6/Ni$ 
 $H_7/Ni$ 
 $H_8/Ni$ 
 $H_8/Ni$ 
 $H_9/Ni$ 
 $H_9/Ni$ 
 $H_9/Ni$ 
 $H_9/Ni$ 
 $H_9/Ni$ 

Ascertainment of the difference between the prior art and the claims (MPEP §2141.02)

Art Unit: 1621

EP 1,503,723 does not teach a catalyst that comprises nickel, chromium, iron and aluminum; therefore, does not teach catalyst concentrations as recited in the limitations.

## Finding of prima facie obviousness

## Rational and Motivation (MPEP §2142-2143)

It is prima facie obvious to combine individual compositions taught to have the same utility to form a new composition for the very same purpose. In re Kerkhoven, 626 F.2d 846, 205 U.S.P. Q 1069 (C.C.P.A 1980). Therefore, it would be obvious for one of ordinary skill in the art at the time of the present invention to combine mixtures of the indicated metal modifiers to be incorporated with the nickel catalyst in order to prepare menthol. One of ordinary skill in the art at the time of the present invention would be motivated to do so in order to optimize process conditions to arrive at the desired product. Also, one of ordinary skill in the art would be motivated to do so due to other variables such cost and availability.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kellette Gale whose telephone number is (571) 272-8038. The examiner can normally be reached on M-F (6:30am-3:00pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page can be reached on (571) 272-0602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
